INDUSTRY NAME Missouri Neon DATE 10-10-95  
CONTACT PERSON Ed Mitchell TIME 8:20 AM  
NUMBER CALLED 862-1778

### PURPOSE FOR CALL

I called to determine the planned uses of their proposed addition. He indicated that 75% of the area will be used for truck storage and in the remaining space their signs will be assembled. Also the building will have at least one floor drain where trucks can be washed. The area will not be used for painting.

Dear Mr. Mitchell:

This is regarding the Missouri Neon Advertising Company facility located at 3160 West Kearney in Springfield, Missouri.

During our conversation of Septemebr 19, 1994, you advised me that the facility was making arrangements to connect the drain from the sign painting preparation area to the municipal sewerage system. You also indicated the issues regarding the satellite accumulation container and the paint booth filters had been corrected.

Please advise this office of your progress in completing the connection to the municipal sewerage system. Your reply within fifteen days of the date of this letter will be appreciated.

If you have any questions, please advise.

Sincerely,

SOUTHWEST REGIONAL OFFICE

Mr. Ed Mitchell  
Shop Foreman  
Missouri Neon Advertising Co.  
3160 W. Kearney  
Springfield, MO 65803

Dear Mr. Mitchell:

This is to confirm our hazardous waste compliance inspection at the Missouri Neon Advertising Company facility on August 23, 1994. The inspection was conducted in response to an anonymous complaint received in this office.

During the inspection, it was determined that the facility is a conditionally exempt small quantity generator generating spent solvents and waste paint related materials during the sign painting operations. The hazardous wastes are disposed of through Safety-Kleen on a regular schedule. No improper disposal of hazardous wastes was observed.

It was noted that paint related waste was placed in a six gallon safety can in the paint preparation and cleanup area then transferred to a sixteen gallon container provided by Safety-Kleen. The six gallon satellite accumulation container was not labeled and had no beginning date of accumulation provided on it. As we discussed, this can be accomplished using masking tape which can be replaced each time the container is emptied into the drum in the hazardous waste storage area.

It was also note that the facility has apparently not tested the spent paint booth filters to determine whether or not they are a hazardous waste. You may be able to make this determination by checking with the paint manufacturer on the metals content of the paint, however, the surest way is to have the spent filters analyzed for the characteristic wastes listed in the regulations. Local testing laboratories can assist you in this determination.

Page 2

Also noted during the inspection, was a discharge of wash water from the sign painting preparation area. I suggest you check with the Springfield Sanitary Services Department to determine the proper method for handling this wastewater. They can be contacted at 864-1924.

By September 23, 1994, you must submit the following documentation to demonstrate a return to compliance with the Hazardous Waste Law and regulations:

1. Photographic documentation demonstrating that the satellite accumulation container for the waste paint related material is properly marked and the beginning date of accumulation is provided.
2. Information on the determination as to whether or not the spent paint booth filters are a hazardous waste.
3. Information on the elimination of the discharge of wash water to the storm sewers.

If you have any questions, please advise.

Sincerely,

SOUTHWEST REGIONAL OFFICE
